

# GDS Export Document

## Export gds file from laker

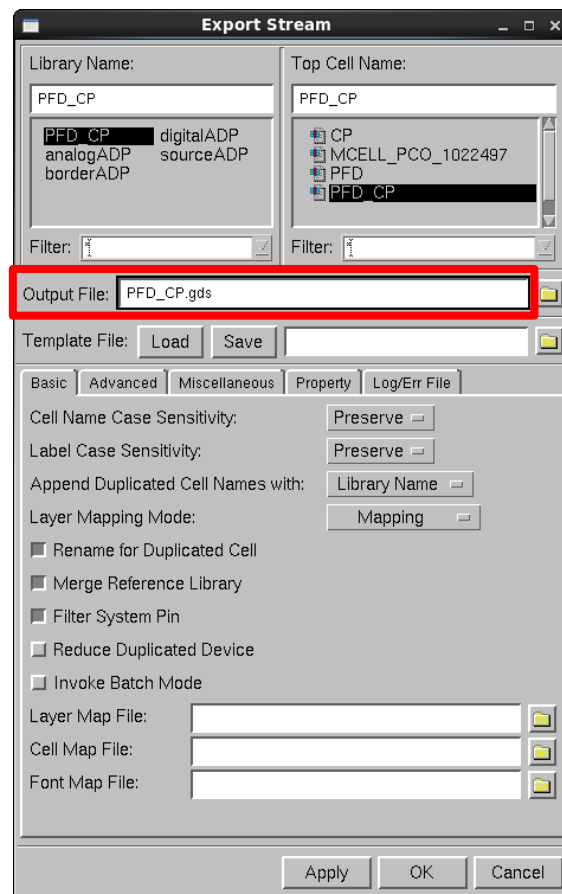

1. Open laker
2. The main window of laker, press **File→Export→Stream...**

3. The “Export Stream” Window opened, choose the library and the top cell you are going to export. In this example, both the library and the cell name is “PFD\_CP”.

4. Name the output file name, and **remember to append the filename extension “.gds” behind the file name**. In this example, the output file name is **“PFD\_CP.gds”**.

5. After all the setting, press OK, and you will see the exported gds file in the folder where you opened laker.
